

From Data Center to Centers of Data. From Firewall to Firewalling Your Network.

Juniper's Connected Security Distributed Services Architecture

Your data center is evolving to centers of data

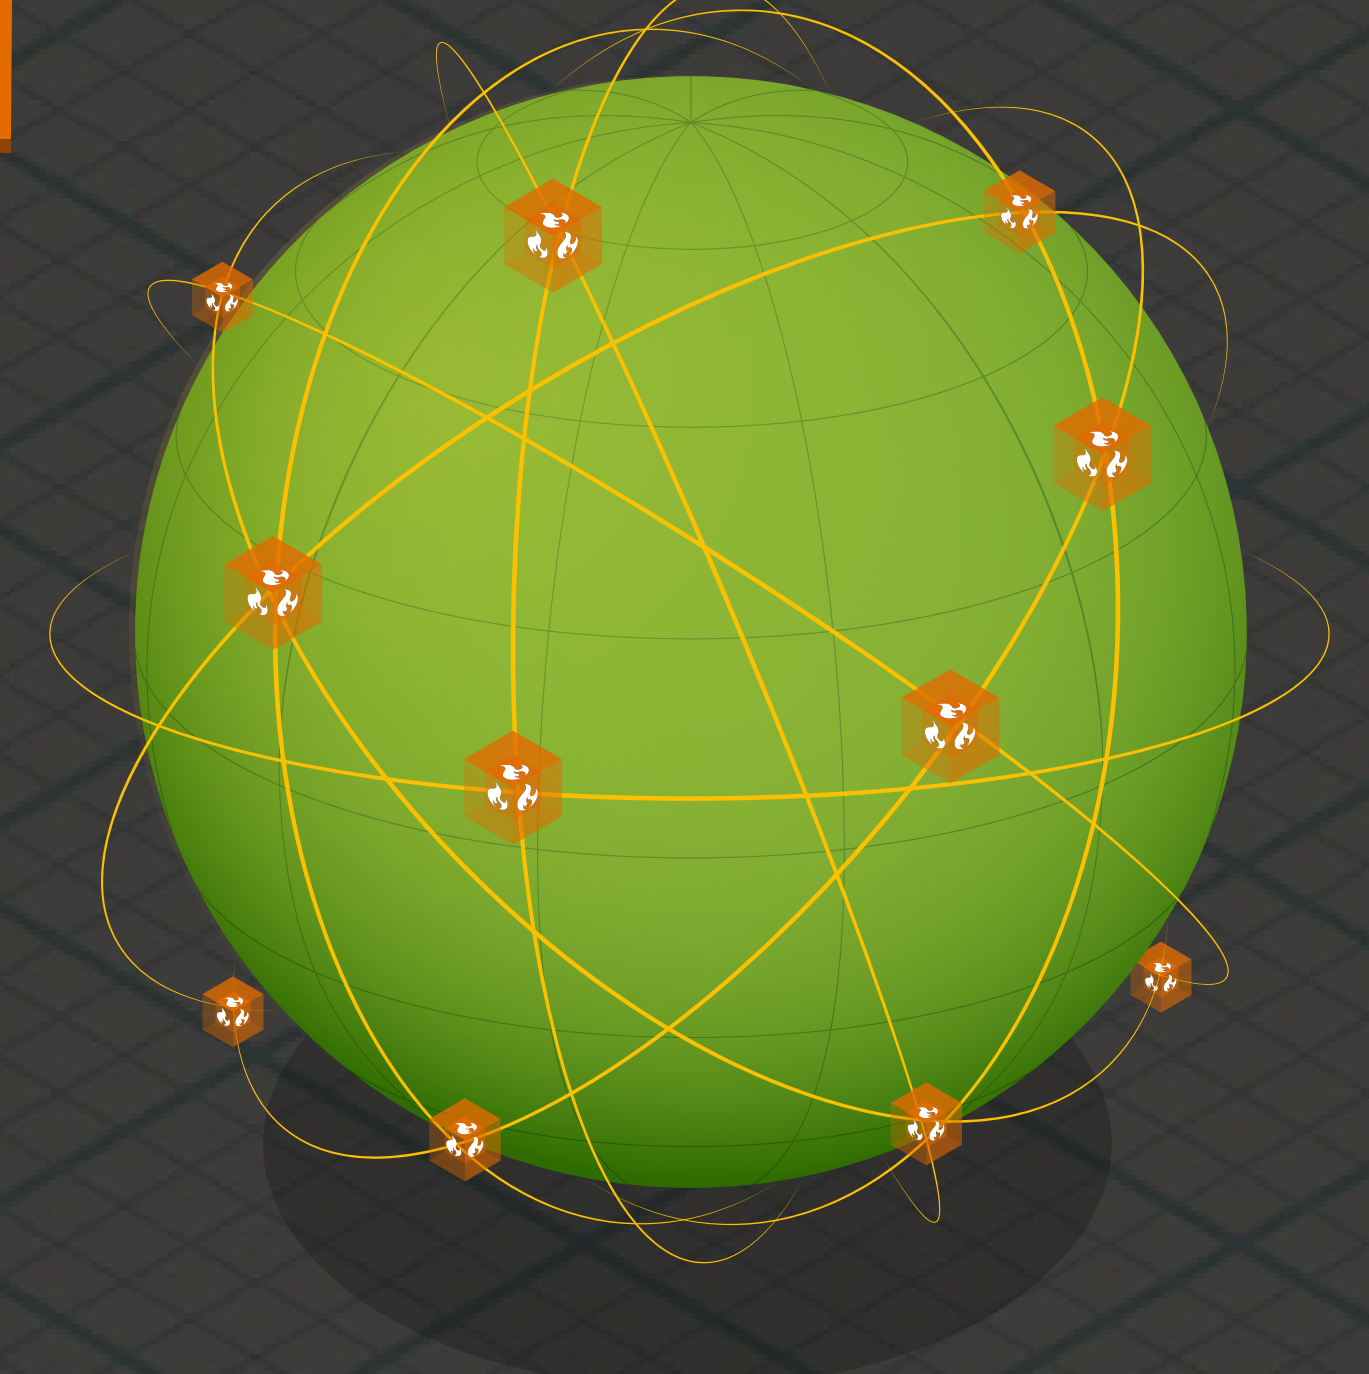

Improved User Experience

Data Sovereignty Compliance

Better Cost Control

From firewall to firewalling your entire network

When data disperses to multiple distributed centers of data, it becomes harder to secure. What you need is a modern approach to operationalizing security services across every point of connection.

Scalability

Simplicity

Flexibility

Introducing Juniper's Connected Security Distributed Services Architecture

Juniper Connected Security

Discover Juniper Networks' experience-first approach to securing and operationalizing your transition to centers of data.
